Final webinar

MOVING TOWARDS OUTPUT-BASED SURVEILLANCE TO CONTROL NONREGULATED DISEASES OF CATTLE IN THE EU

Final SOUND control webinar

COST Action SOUND control ended on 29 October 2022. In this final webinar, the chair of COST Action will present an overview of the project's objectives, outcomes and achievements.

ABOUT THE LECTURER

Dr Inge Santman-Berends works at GD Animal Health as a senior veterinary epidemiologist and leads the Epidemiology group of GD.

Her work mainly focuses on monitoring and surveillance of cattle health, development of products where data is transformed into valuable information for farmers and veterinarians, and innovation projects carried out at GD Animal Health.

Inge is an enthusiastic researcher who is committed to high-quality research and is both scientifically and practically oriented. She loves to add value by translating large amounts of data into practical and understandable information for stakeholders. Her goal, which was also reflected in the SOUND control COST Action, is to contribute to a livestock industry that focuses on preventive medicine rather than cure, supporting high health and animal welfare standards.
